DIGITAL LITERACY PROJECT REPORT

Name: Amulya Mehta

Branch: CSE Core

Year: 1st Year

Course Code: CSE0001

Introduction

This project is based on digital literacy and aims to help students understand the importance of using digital tools safely and effectively. As a student digital ambassador, I completed different tasks that focus on awareness, communication, and online safety.

Task 1 – Infographic

For this task, I had created a digital literacy infographic using Canva. The purpose of this infographic is to spread awareness about digital literacy among each and every students.

My design shows very important topics like safe internet practices, useful digital tools for students, and maintaining a professional online presence. I used simple colors, icons, and short points so that the information is easy to understand.

One interesting thing I found while making this infographic was how design plays a key role in communication. It was a bit difficult to choose the right layout and keep the content short but meaningful. Overall, this task helped me improve both my creativity and understanding of digital literacy.

Task 2 – Digital Portfolio

In this task, I created my profiles on GitHub, LinkedIn, and Stack Overflow.

GitHub is used for sharing and managing coding projects. It helps us in storing code, tracking changes, and building a project portfolio. I will use GitHub over the next four years to upload my projects and improve my programming skills.

LinkedIn is a professional networking platform. It is used to connect with professionals and explore job opportunities. I plan to use LinkedIn to build my professional network and apply for internships in the future.

Stack Overflow is a platform where developers ask and answer programming-related questions. It helps in solving coding problems and learning from others. I will use it whenever I face many difficulties in coding and also try to contribute by answering questions.

This task helped me to understand the importance of building a strong online presence for career growth.

Task 3 – Platforms

For this task, I used HackerRank and Google Forms.

On HackerRank, I practiced basic Python programming by solving beginner-level problems. I worked on topics like loops, printing output, and simple logic building. This helped me to understand how coding platforms work and improved my problem-solving skills.

I also created a Google Form based on digital literacy. The form included multiple-choice questions and short answer related to safe internet usage and digital tools. I tested the form by submitting responses and viewing the results.

These platforms will help me academically by improving my coding skills and allowing me to create interactive quizzes and surveys for learning. They are useful tools for both practice and collaboration.

Task 4 – Email Etiquette

Poor digital communication can sometimes create serious problems. For example, a student once sent an email to a professor without a subject line and used very informal language. The message was unclear and did not properly explain the issue. Because of this, the professor misunderstood the request and did not respond on time, which caused delay and confusion.

This situation could have been avoided by writing a clear subject, using polite and professional language, and explaining the message properly. Proper email structure, including greeting and closing, also helps in better communication.

This shows that effective digital communication is very important in academic and professional life.

Task 5 – Cybercrime Awareness

While researching about cybercrime, the most surprising thing for me was how easily people can become victims of phishing attacks. Even a simple message or email that looks real can trick users into sharing their personal information. I did not realize that such small mistakes could lead to serious problems like loss of money or data.

After learning about this topic, one habit I will personally change is being more careful before clicking on any link or message. I will always check the source and avoid trusting unknown emails or websites.

This task helped me understand the importance of staying alert and responsible while using the internet.

Conclusion

This project helped me to understand the importance of digital literacy in today's world. I had learned how to use digital platforms, communicate professionally, and stay safe online. Overall, this project improved my awareness and skills in the digital world.
